OBJECTIVE

Driven Data Analyst with hands-on experience in Python, SQL, and state-of-the-art machine learning and AI techniques, including deep learning and NLP. Committed to utilizing my expertise in data preprocessing, exploratory analysis, and predictive modeling to provide valuable business insights. Eager to secure a dynamic role that harnesses my skills in developing end-to-end ML pipelines and deploying innovative data solutions that support informed decision-making within an organization.

WORK EXPERIENCE

AI/ML Intern — Jul 2025 - Sep 2025
Labmentix Pvt Ltd

- Engineered machine learning models that boosted predictive accuracy for patient diagnosis, contributing to a reduction in processing errors.
- Partnered with cross-functional teams to innovate data processing strategies, achieving a 30% increase in efficiency.
- Leveraged Python and Tableau for advanced data analysis and visualization, facilitating informed decision-making among stakeholders.

EDUCATION

bikaner technical university
Bachelor of Technology in computer science - 3.7 GPA — 2023 - 2027

PROJECT

Zomato Restaurant Clustering and Sentiment Analysis - Link — Jul 2025

- Engineered a clustering algorithm for categorizing Zomato restaurants based on key metrics like cuisine and customer ratings.
- Performed sentiment analysis on reviews to uncover insights regarding customer experiences and service.
- Created visual representations of clustering and sentiment analysis outcomes to guide strategic decisions.

Customer Segmentation and Product Recommendations in E- Commerce - Link — Jun 2025

- Created machine learning-driven customer segmentation models to enhance e-commerce user engagement.
- Designed product recommendation systems that boosted cross-selling by leveraging user data.
- Analyzed project efficacy, leading to a significant rise in average order value.

Local Food Wastage Management System - Link — Sep 2025

- Created a Local Food Wastage Management System to monitor and mitigate food waste.

- Partnered with local organizations to improve food recovery efforts, achieving a 30% reduction in waste.
- Analyzed data to uncover food wastage trends, contributing to effective policy recommendations.

Multiclass Fish Image Classification - Link Sep 2025

- Created a high-performing deep learning model for fish species identification using TensorFlow.
- Preprocessed a dataset of 10,000+ images to enhance training efficacy and accuracy.
- Optimized model performance to achieve 92% accuracy with data augmentation and hyperparameter tuning.

SKILLS

Machine Learning ●●●●●
Deep Learning ●●●●○
NLP ●●●●○
Gen AI ●●●●○
LLM ●●●●○
Microsoft Azure ●●●●●

- Demonstrated ability to communicate complex concepts clearly and concisely, ensuring alignment across various stakeholders.
- Strong teamwork orientation, actively engaging with colleagues to drive project success through shared responsibility and open communication.
- Proficient in identifying and addressing potential challenges with innovative problem-solving strategies, resulting in improved processes and outcomes.
